REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The primary reason for allowance of claims 1-9 is the claim 1 limitation that the cylindrical outer surface includes a recess to receive a housing of a circuitry chip of a radio frequency transponder before the core receives the length of film. The primary reason for allowance of claims 10-13 is the claim 10 limitation for a radio-frequency transponder on a flexible substrate adhered to the cylindrical outer surface of the film core with the housing of the transponder fitting at least in part in the recess formed on the outer cylindrical surface of the film core, so that the flexible substrate provides a generally uniform exterior surface to receive the length of film. The primary reason for allowance of claims 14-16 is the claim 14 limitation that a radio frequency transponder is fitted into a film feed slot in a cylindrical outer surface of the film core and that the substrate mounted antenna is wrapped circumferentially about the outer cylindrical surface. The primary reason for allowance of claims 17-20 is the claim 17 limitation that at least one of the outer wall, the antenna and the substrate has a recess to receive at least part of the transponder housing so that the outer surface does not have a protrusion caused by the transponder housing. The primary reason for allowance of claims 21-23 is the claim 21 limitation for a step of affixing the radio frequency transponder to the cylindrical outer surface of the core, with the housing being at least partially positioned within the recess formed in the outer cylindrical surface of the core. The primary reason for allowance of claims 24 and 25 is the claim 24 limitation for inserting a transponder circuitry component into a film feed slot in the outer cylindrical surface of the film core and wrapping the antenna component about the outer surface.
